illustrations and descriptions make it easy for an inexperienced spider watcher to identify many of the common species encountered in and around the house the spiders were divided according to the free living species and those that build intricate webs to catch their prey the free living spiders were further divided according to those found on the vegetation and those living on the ground spiders are an abundant diverse and highly successful group of animals they are commonly found on farms in gardens and also in houses they are important predators in all terrestrial ecosystems and are regarded as the best friends of gardeners and farmers in sustainable agriculture because they have the important task of regulating the numbers of potentially harmful insects and mites however they are feared and maligned because of the venom they produce we hope this field guide will help save the lives of a few spiders it will be valuable for the man on the street researchers conservation agencies students gardeners farmers as well as spider watchers and photographers
